Abstract

Today it was impressed by new material design of android and many apps using its design principles,I doubt what is the need of a UI/UX designer ? All things are done by **Google**. **i3WM**'s **i3-nagbar** is simple tool to show a dialog,and added a 's' switch for using it with logout dialog.

What is does is that when 's' is used,if already a nagbar exists then new will not popup :D
$\sqrt{i}$ is still imaginary :D
